ALFALFA

PELLETS

Premium Alfalfa Pellets are high density ¼ inch pellets of Standlee Premium Western Forage®. Alfalfa forage is low in sugar, moderately high in protein, high in calories and quality fiber. Forages are non-perishable and can last for long periods of time if stored properly. Always store forages in a cool, dry and well-ventilated area. As long as the product is properly stored, forages can last for well over a year or more. Available in 40 pound bags.

Benefits:

- Low in carbohydrates.
- Easy to feed and store.
- Minimal waste, can be accurately weighed and measured.

Feeding instructions:

On average, most horses comfortably consume 2% of their body weight in dry forage per day. This equates to 20 lbs of dry forage per day for a 1000 lb horse. Standlee recommends that you weigh the amount of forage provided to each horse to ensure you are feeding the proper amount. Standlee also recommends that pelleted and cubed forage not be the sole source of forage since feeding some long-stem forage (hay) may help eliminate boredom and prevent stall vices. Feed Standlee Premium Western Forage® at a minimum rate of 1.5% of body weight per day. Gradually replace existing hay with Standlee Premium Western Forage® over a 7-10 day period. Replace existing hay on a 1 to 1 basis with Standlee Premium Western Forage®. Standlee Premium Western Forage® is recommended to be fed wet, soaked in water for 30 minutes or until properly softened, for horses that have dental problems or for horses that aggressively consume their feed. Never feed moldy or insect infested forage to horses. Always provide free-access to fresh, clean water.

If you have questions, please contact the nutritionists at Standlee Premium Western Forage® or consult your Veterinarian.

Guaranteed Analysis:

Crude Protein.....16% Minimum
Crude Fat.....1.5% Minimum
Crude Fiber.....30% Maximum
