BEET PULP

SHREDS

Standlee Premium Western Forage® Beet Pulp Shreds are formed from dried sugar beet pulp. Beet Pulp is the pulp that remains after sugar has been removed from the sugar beet. A high calorie, low protein, low sugar fiber source. Beet Pulp Shreds are non-perishable and can last for long periods of time if stored properly. Always store Beet Pulp Shreds in a cool, dry and well-ventilated area. As long as the product is properly stored, Beet Pulp Shreds can last for well over a year or more. Available in 25 pound bags.

Benefits:

- No added molasses.
- No added sugar.
- Minimal waste, can be accurately weighed and measured.

Feeding instructions:

Standlee Beet Pulp is a high fiber source for horses. Beet Pulp can be fed to mature horses at a rate of 0.05 to 0.2% of body weight/day depending on level of activity. For a 1000 lb horse, this equates to ½ -2 lbs of dry beet pulp per day. Gradually introduce beet pulp into the diet during a 7-10 day period. Beet Pulp is a dehydrated product and is recommended to be soaked (completely submerged) in water for a minimum of 15 to 30 minutes prior to feeding, or until properly softened. Soaking product for longer than 30 minutes is not recommended as extended soaking in hot or humid environments may result in mold growth. Never feed moldy or insect infested beet pulp to horses. Always provide free-access to fresh, clean water.

If you have questions, please contact the nutritionists at Standlee Premium Western Forage® or consult your Veterinarian.

Guaranteed Analysis:

Crude Protein.....7.5% Minimum
Crude Fat.....0.5% Minimum
Crude Fiber.....21% Maximum
Moisture.....12% Maximum
